**“Google Chrome Extensions are applications that run inside the Chrome browser and provide additional functionality, integration with third party websites or services, and customized browsing experiences.”**

- Chrome Extensions Developer Guide (<https://developer.chrome.com/extensions>)

# Difference between Plugin and Extension

## Plugin

- Third party software that is meant to interact with a certain program.
- For example; for a web browser you would need to install a plug-in called flash player in order to play videos. Flash player is not native to any browser but is made by a separate company altogether.
- Compatible with most/all of the popular web browsers like IE, Firefox, and Opera.

## Extension

- Extends the functionality of a certain program but they are usually meant to function on a certain program or browser.
- Extensions that are meant for Firefox would only work with Firefox and so would for other browsers.
- Simply pieces of code that you can use to modify the interface.
- For example, toolbars.

# Types of Extensions

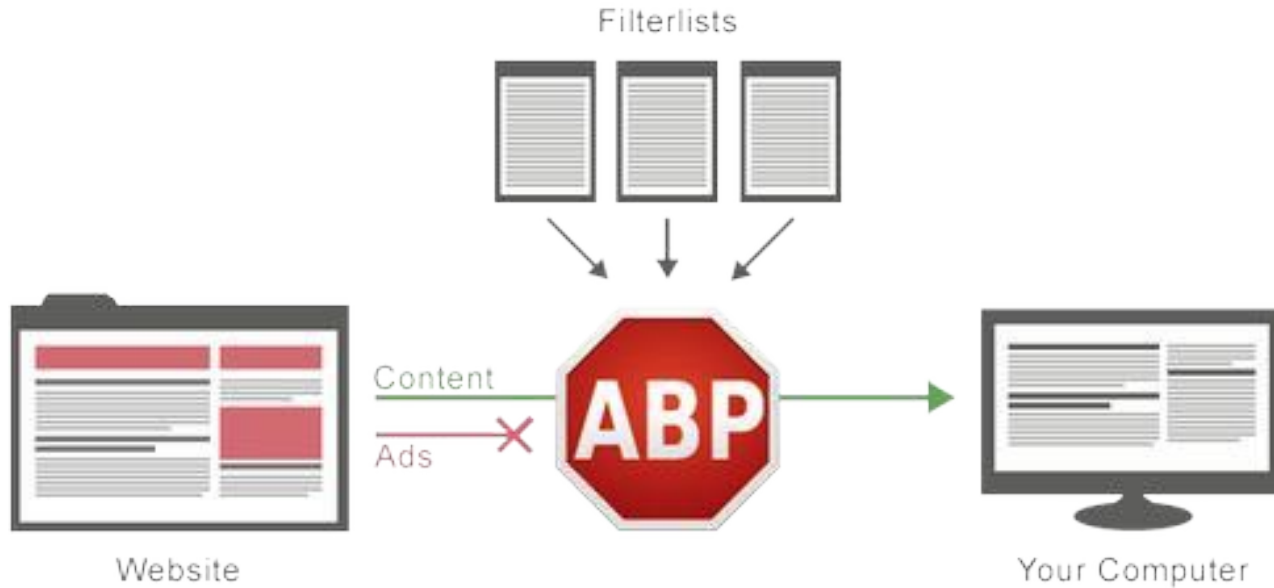

## Examples

- Adblock
- StayFocusd
- Netflix
- Pocket
- PushBullet

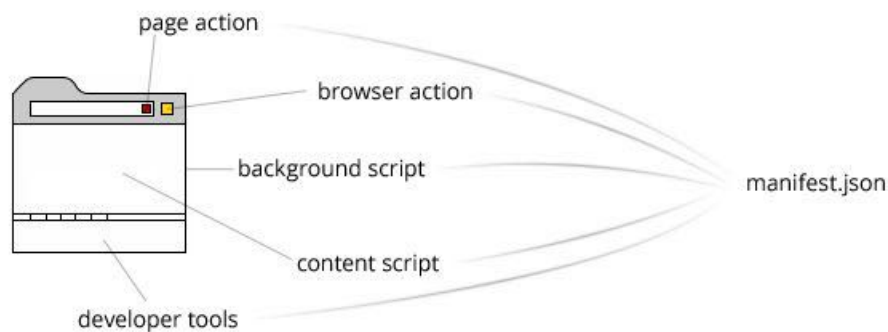

<https://chrome.google.com/webstore/category/extensions>

---

# How does Ad Block work?

# Chrome Extensions in Action

- A manifest file
- One or more HTML files
- *Optional*: One or more JavaScript files
- *Optional*: Any other files your extension needs—for example, image files

# Manifest.json

```
1 {
2   "manifest_version" : 2,
3
4   "name" : "Hello World",
5   "description" : "Hello World",
6   "version" : "0.1",
7
8   "browser_action" : {
9     "default_icon": "minion.png",
10    "default_popup": "popup.html"
11  },
12
13  "background" : {
14    "scripts" : ["js/background.js"],
15    "persistent" : false
16  }
17 }
18
```

**manifest\_version:** One integer specifying the version of the manifest file format your package requires. As of Chrome 18, developers *should* specify 2.

**browser\_action:** A browser action can have an icon, a tooltip, a badge, and a popup. If a browser action has a popup, the popup appears when the user clicks the icon. The popup can contain any HTML contents that you like, and it's automatically sized to fit its contents.

# Background.js and HTML

The background page is an page that runs in the extension process.

It exists for the lifetime of your extension, and only one instance of it at a time is active.

## js/background.js

```
1  (function(){
2
3      alert("Hello World");
4
5  })();
6  |
```

## popup.html

```
1  <!DOCTYPE html>
2  <html>
3      <head>
4          <title>Hello World Demo</title>
5
6          <script type="text/javascript" src="js/background.js"></script>
7
8      </head>
9      <body>
10         <h1>Hello!</h1>
11     </body>
12 </html>
13
```
